

Improved Efficacy & Broadleaf Weed Control

Using Gallery® specialty herbicide with Grounded® improves the efficacy of herbicide applications.

Gallery® specialty herbicide prevents the growth of 95 broadleaf weed species, including dandelion, clover, mustard, oxalis and spurge, for up to eight months in landscape and turf and up to four months in nursery settings, depending on environmental conditions. It is labeled for use on 714 field-grown and 562 container-grown ornamentals. When used with soil applied herbicides, Grounded, a deposition aid, can positively affect spray applications. Grounded improves pesticide applications by modifying the wetting and deposition characteristics of the spray solution resulting in a more even and uniform spray deposit.

Gallery

SPECIALTY HERBICIDE

- Controls 95 broadleaf weeds, including dandelions, with long-lasting residual
- Prevents reapplications due to weed breakthroughs & minimizes hand weeding
- Labeled for use on warm- & cool-season turf & a broad array of ornamentals
- Can be applied in the spring or fall

Laying the Foundation

GROUND^{ED}

- Keeps pre-emergent herbicides in the target area for optimal weed control
- Can prevent leaching of pesticides through soil profile
- Improves droplet size uniformity
- Reduces evaporation & drift
